

آشنایی با پایگاه اطلاعاتی

CLINICAL KEY™

واحد توسعه و تحقیقات بالینی مرکز آموزشی
درمانی آیت الله روحانی بابل

CLINICAL KEY™

➤ پایگاه Clinical Key ، مجموعه ای از محصولات انتشارات *Elsevier* می باشد.

➤ یک موتور جستجوی بالینی و یک پایگاه اطلاعاتی قدرتمند که جامعیت ، مورد اطمینان بودن و سرعت در بازیابی اطلاعات و پاسخگویی از مزیت‌های آن محسوب می شود.

➤ مجموعه ای است از مجلات ، کتاب ، راهنماها ، اطلاعات دارویی ، تصاویر ، ویدیوهای پزشکی و جراحی و شواهد بالینی مورد نیاز پزشکان ، پیرا پزشکان ، دانشجویان و بیماران

Why CLINICAL KEY ?

- Elsevier produce about 25% clinical information resources
- Clinical Key and UTD complete each other
- Clinical key is one of EBM resources:
 - Best research evidence
 - Clinical expertise
 - Patient preferences

CLINICAL

KEY

➤ بیش از ۵۰۰ عنوان مجله پزشکی و جراحی از انتشارات Elsevier

➤ بیش از ۱۱۰۰ عنوان کتب مرجع پزشکی و جراحی

➤ مجموع کامل ۵۷ عنوان مجله از مجلات Clinics of north America

➤ آموزش بیش از ۳۵۰ تکنیک جراحی و ۴۵۰ عنوان شرح عمل جراحی

➤ مقالات بالینی و شرح بیماریهای مبتنی بر شواهد بیش از ۷۵۰ بیماری

➤ دسترسی به بیش از ۱۵۰۰۰ راهنمای آموزش بیمار

➤ حدود ۱۳۰۰۰ ویدیو پزشکی

➤ حدود ۵۰۰۰۰۰۰ تصویر پزشکی

➤ بیش از ۴۰۰۰ راهنمای عملی بالینی

➤ اطلاعات بیش از ۲۹۰۰ دارو که توسط شرکت Gold standard فراهم شده و به روزرسانی می شود.

➤ ۲۰ میلیون خلاصه مقاله مدلاین که به صورت روزانه از کتابخانه ملی پزشکی به این مجموعه اضافه می گردد.

برای استفاده بهتر از امکانات این پایگاه مانند ذخیره و بازیابی نتایج جستجو در مراجعات بعدی، ثبت نام (Register) کنید . پس از انجام ثبت نام ، از گزینه Login برای وارد شدن به پایگاه استفاده نمایید.

دسترسی به متن کامل

Keywords

bacteremia, decubitus, elderly, enterohemorrhagic *Escherichia coli*, herpes zoster, influenza, pneumonia, tuberculosis, urinary tract infection, West Nile virus

Short View Summary

GENERAL CONSIDERATIONS

- People living past 65 years of age are rapidly increasing in number.
- Individuals older than age 65 years have a higher incidence of most infections than do younger people.
- For nearly all infections, clinical manifestations are more subtle in the elderly.

URINARY TRACT INFECTION

- Asymptomatic bacteriuria should not be treated.
- Symptomatic infection is often caused by organisms other than *Escherichia coli*.
- Extended-duration therapy (i.e., >7 days) of symptomatic infection is not needed in either men or women.

RELX Group™

Abstract

with rare missense alleles in genes other than CFI. Genotyping in 5,115 independent samples confirmed associations with AMD of an allele in C3 encoding p.Lys155Gln (replication $P = 3.5 \times 10^{-5}$, OR = 2.8; joint $P = 5.2 \times 10^{-9}$, OR = 3.8) and an allele in C9 encoding p.Pro167Ser (replication $P = 2.4 \times 10^{-5}$, OR = 2.2; joint $P = 6.5 \times 10^{-7}$, OR = 2.2). Finally, we show that the allele of C3 encoding Gln155 results in resistance to proteolytic inactivation by CFH and CFI. These results implicate loss of C3 protein regulation and excessive alternative complement activation in AMD pathogenesis, thus informing both the direction of effect and mechanistic underpinnings of this disorder.

Citation

Rare variants in CFI, C3 and C9 are associated with high risk of advanced age-related macular degeneration.

Acetaminophen

Acephen | Aceta | Actamin | Anacin Aspinn Free | Apra ...

Drug Information Provided By Gold Standard

Description: Acetaminophen (APAP, paracetamol) is a para-aminophenol analgesic and the active metabolite of phenacetin. Due to the toxic effects of phenacetin at therapeutic doses and the availability of acetaminophen, phenacetin is no longer used. Acetaminophen possesses analgesic and antipyretic activity similar to aspirin; however, acetaminophen has no peripheral antiinflammatory activity or effects on platelet function. Acetaminophen was first used in clinical medicine in the 1890's. It is effective in the relief of both acute and chronic pain and may be preferred over NSAIDs due to fewer hematologic, GI, and renal effects. Acetaminophen is the preferred analgesic/antipyretic for patients in whom aspirin is contraindicated and in those with underlying renal disease for episodic, though not chronic, use. In addition, acetaminophen has been recommended by the American Lung Association as the first line treatment for aches and pains associated with the flu, by the American Geriatrics Society for both minor and persistent pain in elderly patients, and by the American College of Rheumatology as first-line therapy for osteoarthritis of the hip or knee. The drug has a history of safe and effective use; however, unintentional or intentional misuse of acetaminophen is the number one cause of acute hepatic failure in the U.S. Acetaminophen was first approved by the FDA in 1950. Intravenous acetaminophen (Ofirmev) was approved by the FDA in November 2010 for the treatment of pain and fever in adults, adolescents, and children over the age of 2 years.

Mechanism of Action: The exact mechanism of action is unknown, but acetaminophen is thought to mediate its actions centrally through activation of the descending serotonergic pathways. Acetaminophen is believed to increase the pain threshold by inhibiting prostaglandin (PG) synthesis through the

Migraine Headache

Disease Overview View Full Topic

Fert's Clinical Advisor 2016 - Fert, Fred F., M.D., F.A.C.P.

Definition

Migraine headaches are recurrent headaches that are either preceded by a focal neurologic symptom (migraine with aura), occur independently without preceding focal neurologic symptoms (migraine without aura), or have atypical presentations (migraine variants). The migraine aura typically is characterized by visual or sensory symptoms that develop over 5 to 60 min. If aura includes motor weakness, the migraine is referred to as hemiplegic. In migraine with and without aura, the headache is typically unilateral, pulsatile, and associated with nausea and vomiting, photophobia, and phonophobia. Migraines that occur ≥15 days every month for ≥3 months are known as chronic; otherwise, they are referred to as episodic.

Asthma in Children

Disease Overview > View Full Topic

Conn's Current Therapy 2016 - Bope, Edward T., MD; Kelleman, Rick...

Epidemiology

Asthma prevalence in the United States has been on the rise since the 1990s. It is currently estimated that 9.6% of children younger than 18 years (7.1 million children) carry the diagnosis of asthma. Male sex, African American or Puerto Rican ethnicity, and lower socioeconomic status are associated with an increased risk of developing asthma. Prevalence estimates for these groups are as high as 11% to 16%.

Asthma has a significant impact on both school attendance and health care expenditures. According to the National Health Statistic Report in 2007, children made 640,000 emergency department visits and were hospitalized 157,000 times as a result of asthma. In 2008 it was estimated that there were 10.5 million missed school days, and about 5% of children reported long-term limitations on their usual activities due to asthma symptoms.

The screenshot shows a search results interface with the following elements:

- Filters:** A sidebar on the left contains 'Videos' and 'Images' filters, both with an 'X' icon to close them.
- Results Count:** '35 results' is displayed at the top left of the main content area.
- Sorting and View Options:** At the top right, there are dropdown menus for 'Show: Subscribed Content', 'Sort by: Relevance', and 'View: Grid'.
- Thumbnail Grid:** The main area displays a grid of 35 scientific thumbnails. These include various types of visualizations such as flowcharts, bar graphs, line graphs, heatmaps, and diagrams. A red arrow points from the 'View: Grid' dropdown to the grid of thumbnails.
- Navigation:** At the bottom center, there is a pagination bar with the numbers '1 2 3 4 5 ... 130 Next >', where '1' is underlined.

اگر خواهان اطلاعاتی در مورد پروسه جراحی باشیم می توانیم از قسمت procedures consult استفاده کنیم

به عنوان مثال می خواهیم در مورد جراحی Thyroid gland اطلاعاتی به دست آوریم

The screenshot shows a web browser window with the ClinicalKey website. The search bar contains "Thyroid gland" and the results are filtered by "Procedures". The search results list several procedures, with the third result, "Radial Artery Access for Coronary Angiography (Cardiology)", highlighted in a light blue box. The browser's address bar shows the URL: https://www.clinicalkey.com/#/search/Thyroid%20gland/%7B%7D. The page includes navigation links for English, CME, Login, and Register. A vertical "Help & Feedback" button is visible on the right side.

Guidelines رهنما بالینی

برای پیدا کردن راهنماهای بالینی از قسمت Guidelines استفاده می کنیم. به عنوان مثال یک راهنما در مورد نحوه رفتار با بیمار مبتلا به پارکینسون می خواهیم

The screenshot shows the ClinicalKey website interface. The browser address bar displays the URL: https://www.clinicalkey.com/#/content/nice_guidelines/65-s2.0. The page title is "Parkinson's disease in over 20s: diagnosis and management (CG35)". The main content area is titled "GUIDELINE Parkinson's disease in over 20s: diagnosis and management (CG35)" and is attributed to the "National Institute for Health and Care Excellence (NICE)". The "Introduction" section states: "Parkinson's disease (PD) is a progressive neurodegenerative condition resulting from the death of the dopamine-containing cells of the substantia nigra. There is no consistently reliable test that can distinguish PD from other conditions that have similar clinical presentations. The diagnosis is primarily clinical, based on a history and examination." The "Health and resource implications" section states: "Parkinsonism can also be caused by drugs, and conditions that are less common than PD. These include multiple cerebral infarction and degenerative conditions such as progressive supra-nuclear palsy (PSP) and multiple system atrophy (MSA). Although PD is predominantly a movement disorder, other impairments frequently develop including psychiatric problems such as depression and dementia. Autonomic disturbances and pain (which is rarely a presenting feature of PD) may later ensue, and the condition progresses to cause significant disability and handicap with impaired quality of life for the affected person. Family and carers may also be affected indirectly." The left sidebar contains a table of contents with the following items: "Introduction", "Patient-centred care", "Key priorities for implementation", "1 Guidance", "2 Notes on the scope of the guidance", "3 Implementation in the NHS", "4 Research recommendations", "5 Other versions of this guideline", "6 Related NICE guidance", "7 Review date", "Appendix A: Grading scheme", "Appendix B: The Guideline Development Group", "Appendix C: The Guideline Review Panel", and "Appendix D: Technical detail on". The top navigation bar includes "Guidelines" and "Parkinson disease" tabs, a search bar, and links for "Books", "Journals", and "More". The top right corner features "English", "CME", "Login", and "Register" options. A "Help & Feedback" button is located on the right side of the page.

کار آزمایى بالینی Clinical trials

کار آزمایشی بالینی یک مطالعه پزشکی به منظور ارزیابی و مشاهده اثر یک مورد معین در سلامت فرد می باشد. ثبت کارآزمایی بالینی منجر به جلوگیری از انجام مطالعات تکراری می شود.

The screenshot shows the ClinicalKey website interface. At the top, there is a search bar with the text "pancreatic cancer" and a search icon. Below the search bar, there are filters for "Source Type" and "Date". The search results section shows 885 results, with the first result being a clinical trial titled "A Phase 1, Open-label, Multicenter, Safety Study of Nivolumab (Bms-936558) in Combination With Nab-paclitaxel Plus or Minus Gemcitabine...".

The detailed view of the article "Pancreatic Cancer" is shown on the right side of the page. It includes a "Disease Overview" section with a "View Full Topic" link. The "Definition" section states: "Pancreatic cancer usually refers to ductal adenocarcinomas of the pancreas, because more than 90% of pancreatic tumors arise from the ductal epithelium. Other major tumors of the pancreas include endocrine malignancies (Chapter 195), carcinoid tumors (Chapter 232), lymphomas (Chapter 185), and a variety of rare sarcomas."

The "Epidemiology" section states: "Pancreatic ductal adenocarcinoma (PDAC) has one of the highest incidence-to-mortality ratios of any disease. Although it represents the tenth leading cause of cancer in the United States, it is the fourth leading cause of cancer-related deaths, ¹ because the vast majority of patients will die from their disease. Annually, approximately 40,000 individuals will die in the United States from PDAC or its complications. The

CLINICAL TRIAL

Safety Study of Nivolumab With Nab-Paclitaxel Plus or Minus Gemcitabine in Pancreatic Cancer, Nab-Paclitaxel / Carboplatin in Stage IIIB/IV Non-Small Cell Lung Cancer or Nab-Paclitaxel in Recurrent Metastatic Breast Cancer

First received on December 3, 2014. Last updated on March 30, 2016.

Purpose

The purpose of this study is to assess safety of nab-paclitaxel based chemotherapy regimens administered prior to and/or in combination with nivolumab in Pancreatic Cancer, Non Small Cell Lung Cancer (NSCLC) and Metastatic Breast Cancer (mBC).

Status	Recruiting
